

OSS **Token** Platform

Web3 × OSS (Open Source Software)

Building a Sustainable OSS Economy with
Support Proof Tokens

Not an Investment, But Proof of Support

Problem: OSS Funding Shortage

Current Challenges

- **Developer Burnout:** Limits of sustainability due to unpaid work
- **Fundraising Difficulties:** Instability of donations and sponsorships
- **Invisible Support:** Support is not properly recognized

Result

→ Excellent OSS projects become difficult to sustain

Solution: What are Support Proof Tokens?

Conventional Token Thinking

- ✗ Consumable Tokens: Use up and done
- ✗ Speculative Value: Short-term profit seeking

In This Product

- ✓ Holding Tokens: Value in continued possession
- ✓ Support Proof: "How much you supported" is visible at a glance
- ✓ Long-term Relationships: Sustainable community formation

"Not an Investment, But Proof of Support"

Flow to Donation

1. Maintainer Registration via GitHub OAuth and GitHub App

Feature ①: Pre-Money Valuation System

Dynamic Price Calculation Mechanism

Token Price = Base Price + **GitHub Quality Score** + Donation Accumulation Effect

GitHub Quality Score (Current)

-  Commit Freshness
-  Download Count
-  Issue Count
-  Star Count

Feature ②: Price Stabilization through RLUSD Conversion

Solving XRP Volatility Issues

XRP volatility is still significant, causing price fluctuations during donations
and significant token price changes after donations

To prevent this and stabilize prices during donations, we **utilize the RLUSD order book**

Feature ③: Check-based Transactions

Using CreateCheck and CheckCash Transaction Type

Conventional Problems

- Trustline setup required in advance
- Risk of user drop-off due to complex procedures

Benefits of Check-based TXs

1. CreateCheck: Automatically issue and send token checks
2. CheckCash: Easy receipt via Xaman app

Complete token receipt in 2 steps including donation!

Future Prospects: Automatic License Key Issuance

Mechanism

1. Apply for license issuance through a flow similar to donations
2. Automatically issue license keys with periods set according to donation amount and token holdings
3. License keys are viewable on the platform
4. Offline license key verification using addresses within OSS

Token holdings are reflected in discounts and license period extensions

→ A mechanism where long-term supporters and early supporters hold more and are given preferential treatment

MVP Achievement: 95% Complete

✓ Implementation Complete

- GitHub OAuth, GitHub App
- Project registration and management
- XRPL integration (CreateCheck/CheckCash)
- Donation flow and token issuance
- Pre-Money Valuation System with RLUSD conversion

🚧 Short-term Implementation Plans

- License key issuance system
- Private repository support

Demo Introduction

See the Actual Operation

Demo Content

1. ~~Maintainer Registration Flow: From GitHub integration to project registration~~ (Omitted)
2. Donation Flow: From QR code scanning to donation completion
3. Token Receipt: Check cashing in Xaman

Seamless experience completing donation and token receipt in 2 steps

Summary

Vision

A sustainable OSS economy through "Support Proof Tokens"

Innovative Features

Pre-Money Valuation × RLUSD Stabilization × Check-based Transactions

Practicality

Future automatic license key issuance and OSS priority support through token holdings
